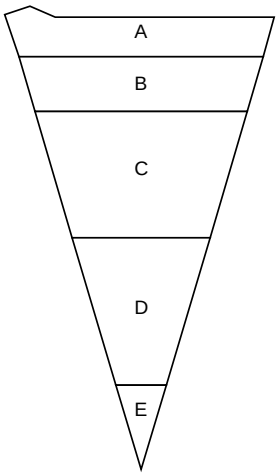
Plate Tectonics & Volcanoes -- Practice

Name: _____



1. Wegener's theory: _____
2. His two clues: _____
3. Hess's tool: _____
4. At a mid-ocean ridge: _____
5. Asthenos means: _____

6. Describe convergent, transform, and divergent movement.

_____

7. What happens during subduction?

_____

8. Which layer is hottest? How do magma and lava differ?

_____

9. Name two Ring of Fire boundaries (both plates for each).

_____

10. What is a dormant volcano?

_____

11. Compare composite and shield volcanoes: eruptions, magma, shape, location.

_____

12. Name three shared volcano traits from the sheet.

_____

13. Why is plate tectonics like a recycler?

_____

Answer key uses worksheet study targets. See Learn for science notes and explanations.
